Hutch Series 10

Using our H-9801 slider as a proven benchmark, the Hutch Series 10 Slider was developed as a lighter-weight, extremely durable suspension/subframe for the dry van and refrigerated trailer market. Using knowledge from decades of slider production and customer feedback, along with state-of-the-art FEA and controlled benchmark testing in our Engineering Research Laboratory, our new slider combines new design concepts with lighter materials and our advanced welding capabilities. Production of the Series 10 is also maintained through the controls of our UL-registered ISO 9001:2008 quality system.

The Series 10 Slider has been developed for van/refrigerated trailers requiring a 48" nominal frame width and 49" axle centers. The slider utilizes an innovative frame structure with redesigned hangers that still accommodate the most popular Hutchens steel leaf springs and suspension options. The Series 10 works with all current Hutchens van slider body rails and can be used in place of the H9801 spring slider. The deeper frame of the Series 10 combined with the shorter hybrid hangers produces the same mounting height as the H9801.

The Hutch Series 10 Slider is so drastically improved that we're backing it with a **10 Year Warranty.**

Now that's confidence in Hutch engineering.

How To Order Your Series 10 Slider System

The Series 10 slider may only be used with overslung axles and the following taper leaf springs:

363-00	354-00	365-01
324-01	355-00	
325-01	356-00	
326-01	365-00	

1. Determine if the 48" frame width and 49" axle centers of the Series 10 slider will fit within the envelope of your particular application. The deeper frame combined with shorter, "hybrid" hangers produces the same mounting height as that of our 9801 slider assembly.
2. The Series 10 slider is equipped with low profile, "hybrid" 9700 hangers attached at our factory.
3. Select the range of slide adjustment you need and determine the body rail length required to provide that range. The Series 10 will work with all current Hutchens van slider body rails.
4. A locator bar assembly is a standard component with every Hutchens slider. The locator bar should be used as directed when re-positioning the slider.
5. With the limited options of the Series 10, each unit must be ordered by a description of the slider. See example below:

Example: A Series 10 slider with 48" frame width, 49" axle centers, 192" body rails and a locator bar would be ordered as follows

Quantity	Model	Frame Width	Body Rail Length	With Locator Bar
1 ea.	Series 10	48"	192"	w/Locator Bar

1ea. Series10-48-w/192" body rails and locator bar*

*If you are ordering a complete suspension with the slider, a description of the unit must follow (i.e. 3/4 seats for 5" round axles, less standard 3-leaf springs with 7040-08 U-bolts).
